

RELIABLE AND DURABLE

WITH SIMPLE MOUNTING

Van Rooy & Co's ADKR-set is designed to fix crop wire onto the wire arch in a simple, yet reliable way. It forms a fixation without sharp corners or deformation of the wire, which makes the mounting set very durable.

COMPONENTS ADKR-SET

- 2x steel wire clamp M16*
- 2x turnbuckle M12 with mounted thimble
- 4x steel wire clamp M6

*dependent on wire arch diameter

ADVANTAGES ADKR-SET

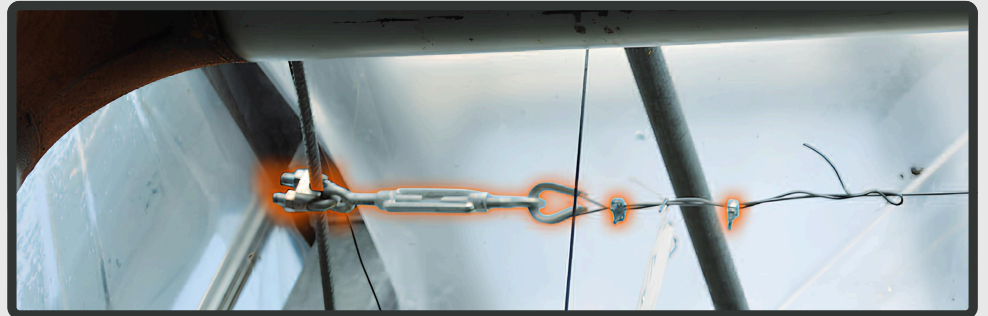

- ✓ The forces are transferred exactly into the heart of the wire arch
- ✓ No sharp angles in the wires
- ✓ Very simple mounting

! SAG IS IMPORTANT !

The sag for tomatoes must be at least 25 cm, for other crops at least 20 cm. The sag must be measured in the middle of a section. The lowering hooks in a greenhouse usually hang around 5 meters center to center.

ADKR WIRE ARCH MOUNTING

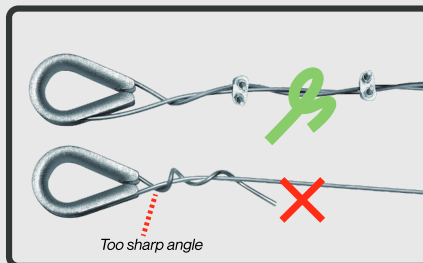

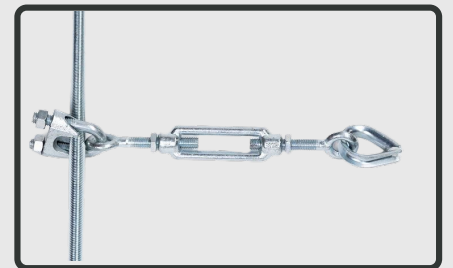

NO. 1 MOUNTING SYSTEM OF CROP WIRE ONTO THE WIRE ARCH

MOUNTING INSTRUCTION

Step 1: Attach the turnbuckle with attached thimble via the steel wire clamp M16 onto the wire arch of the greenhouse

CAUTION: make sure that the turnbuckle is not fully turned in or out

*If you follow the above procedure carefully, the chance of wire breakage is virtually eliminated.

Step 2: Pass the wire through the thimble

Step 3: Swivel the wire with 5 to 6 turns, without sharp bends

Step 4: Secure the wire securely with 2 steel wire clamps M6

MINIMAL SAG
